

Sandberg USB Numeric Keypad AluGear

The Sandberg USB Numeric Keypad makes typing numbers quick and easy. Keyboards without numeric keypads, typically on laptop computers, make typing numbers very slow. The Sandberg Numeric Keypad gives you time to spare. The small and elegant keypad simply connects to a USB port and works straight away, as no software needs to be installed. It allows you to type numbers just like using a pocket calculator. The keypad has an integrated 2-port USB hub, allowing you to connect extra USB devices. The Sandberg Numeric Keypad is a must-have item in your laptop bag!

PC Planet in Denmark tested the AluLine Numeric Keypad (issue 19/05/2005) and wrote:

"Some times it is the small, simple accessories that are the smartest... For example, it can be difficult to enter lots of numbers and perform calculations if you don't have a numeric keypad. Sandberg has come up with the remedy with their Numeric Keypad..."
