

Sandberg S-video Y-cable, 1xM->2xF

If you want to view the same S-video signal on two screens simultaneously, you can use this Y splitter. Perfect for demonstrations, trade fairs, in-store displays, surveillance, etc. Note that some signal loss is experienced when splitting an S-video signal in this way. The splitter can also be used to split an input, but you must ensure that the device not being used is switched off.
