

**Sandberg ATA133 cable, round, 0.5 m**

These round IDE cables minimise cable clutter in your computer. The round cables are less bulky, so provide more space and better air flow through the case. The cables support the new fast ATA133 standard, ensuring the fastest transfer rates available on the market. Of course, the cables also support ATA66/100. In contrast to cheap imitations, these round cables are not merely rolled ribbon cables, but are made with 40 individual twisted cable pairs, which minimises cable noise and maximises speed.
